Password Managing

Keychain and 1password

Keychain

- Stores your passwords and account login info and stores so you don't have to remember

- When you access a website, email acct, network server or other password protected item, you may be given option to remember and save by Keychain

- If you choose to save, it's saved in your keychain

- Keychain access works in collaboration with iCloud Keychain, which lets you share keychains with other devices

Keychain

- Keeps your Safari website user names and passwords, credit card info, and WiFi network info up to date across all your approved devices

- Can also keep accounts you use in Mail, Contacts, Calendar and Messages up to date across all your Macs

- Major disadvantage is it only works in Safari browser

1Password

- Password manager for all your devices

  - Only have to remember one password

  - Works in many browsers

  - Works in supported IOS apps

  - Password generator with multiple combinations

1Password

- Is a digital wallet for all your important info

- You can have multiple vaults, each with multiple folders

- On IOS devices, can log in with Touch ID or Face ID

- AES-256 encryption

- Install on as many devices as you own, home or work

1Password

- Full control over where you store your data and how you sync it

  - Keep data offline or sync with Dropbox, iCloud or 1Password servers

- End to End encryption. Data is encrypted before it leaves your device

- Master password not stored anywhere and Account Key only stored on device

1Password

- Sign up for 30 day free trial without credit card info

- After trial, costs if $3.99 per month, all upgrades included

- Download app and sign in

- If subscription lapses, your account will be frozen but you will still be able to access, view and export your data
